

## Open - End - Minitramp

The Open-End-Minitramp is a modified version of the proven minitramp. The flat oval frame with frame-less jump in and out zone offers a strong performance and is suitable especially for more difficult jumps. Through the barrier-free entry and exit zone, the Open-End-Minitramp entails more safety. The device is offered with a high-performance 13-mm jumping bed, as standard feature. Even more powerful is the Premium model which is equipped with 6-mm-thick nylon bed. The Open-End-Minitramp is meant for users that have a high achievement objective.

The Open-End-Minitramp "School" with a jumping bed made of 13-mm-wide nylon bands is an alternative model that can be offered more cost-effectively in price with a simplified foot construction.
